TOPCOAT® Restoration
Specifications Structural Concrete

Updated: 1/11
**TOPCOAT® Restoration Specifications Structural Concrete**

**PART 1 – GENERAL**

**1.01 RELATED SECTIONS/DOCUMENTS**

GAF Materials Corporation (GAFMC) Detail Drawings, site specific drawings and General Provisions of the contract, including General, Supplementary and Special Conditions found in the Division 7 Specification Sections, apply to the work addressed in this section.

**1.02 SYSTEM DESCRIPTION**

Extent of TOPCOAT® Roofing System work is indicated on the drawings and is further defined by provisions of this section, which includes roofing, flashing, and reinforcing of joints and junctions and roof penetrations/accessories. Areas to be re-roofed include existing structural concrete roofs as indicated on drawings. Final determination of the fitness of the TOPCOAT® System, or its components, for any given concrete roof may not be made by any representative of GAFMC other than a member of GAFMC’s Contractor Services Department.

**1.03 WARRANTY**

Provide GAFMC/ TOPCOAT® System Guarantee per the requirement of the Building Owner and/or Project Architect. In order to obtain any GAFMC/ TOPCOAT® System Guarantee, the following conditions apply:

A. Determination of the appropriateness of the TOPCOAT® Roofing System for any given metal roof must be obtained from GAFMC's Contractor Services Department prior to offering any GAFMC/ TOPCOAT® System Guarantee. GAFMC will not offer a guarantee on any TOPCOAT® System being installed over an unfit, unsound, or inappropriate substrate.

B. Installer must be a Certified GAFMC Contractor. GAFMC/ TOPCOAT® System Guarantee work cannot be sub-contracted to a non-certified applicator.

C. TOPCOAT® Roofing System must be applied to the full area of the roof. A GAFMC/TOPCOAT® System Guarantee will not be issued for GAFMC System installations over a section of any roof unless otherwise approved in advance by GAFMC’s Contractor Services Department.

D. Installer shall provide GAFMC Contractor Services Department at least two weeks notice for scheduling of on-site technical support/inspections.

E. TOPCOAT® Elastomeric Roofing Membrane should be spray-applied. Any installation where TOPCOAT® Roofing Membrane will be applied by another method must be pre-approved by GAFMC’s Contractor Services Department.

F. All gutters and roof areas which pond water for more than 48 hours after precipitation ceases are excluded from coverage under the GAFMC/ TOPCOAT® System Guarantee.

See limited warranty and guarantee for complete coverage and restrictions.

**1.04 SUBMITTALS**

Submit copy of TOPCOAT® technical product data sheets, installation instructions, and samples for each type of required roofing product.

**1.05 QUALITY ASSURANCE**

A. **Manufacturer Qualifications:** Provide primary products, including TOPCOAT® Roofing Membrane, TOPCOAT® Flashing Grade, TOPESTER Fabric, etc., by a single manufacturer (GAFMC), which has produced this type of product successfully for not less than twenty years. Provide secondary products only as approved by GAFMC, for use with the specified TOPCOAT® Roofing System.

B. **Installer Qualifications:** A single Installer or firm (“Installer”) shall perform all work addressed in this section, and shall be certified by GAFMC, for installation of the TOPCOAT® Roofing System.

C. **Installer Authorization:** Installer shall possess written authorization from GAFMC, which certifies it is approved for installation of the TOPCOAT® Roofing System.
1.06 SUBSTRATE CONDITIONS
A. The TOPCOAT® Roofing System is to be applied over structural concrete only. Must have positive drainage. Concrete roof substrate must be completely cured and dry before application of TOPCOAT® products. Substrate should not pond water for a period longer than 48 hours. TOPCOAT® shall not be used for application on lightweight concrete.

B. The TOPCOAT® Roofing System is not to be used on heavy-traffic bearing substrates. If foot traffic is expected, an approved walkway system should be installed.

C. The bonding surface must be free of ponding water, ice, and snow.

D. If any questions arise regarding the compatibility of TOPCOAT® products with an existing substrate, Installer shall prepare test patches to check adhesion (addressed in Part 3 of this specification). Always contact GAFMC’s Contractor Services Department concerning questionable substrates, required additional information and recommended test patch materials.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS
GAF Materials Corporation

2.02 MATERIALS - GENERAL
Note Drying Times: Listed drying times for various TOPCOAT® products are directly affected by environmental conditions and thickness of application. Allow additional drying time when experiencing high relative humidity, low temperatures and/or very thick product application to prevent improper curing and/or product “wash-off”.

A. TOPCOAT® Flashing Grade (Regular and Spray Formula)
TOPCOAT® Flashing Grade is a light gray, water-based 100% acrylic synthetic rubber sealant which is applied to seams, fasteners, flashings, and penetrations prior to the application of the TOPCOAT® Elastomeric Roofing Membrane. Like the TOPCOAT® Roofing Membrane, it has superior adhesion, flexibility, and resistance to ultraviolet degradation. A sprayable version of Flashing Grade (Flashing Grade Spray Formula) is available for use. Flashing Grade Spray Formula has all the same properties as regular Flashing Grade, but is lower in viscosity. Do not apply at temperatures below 42°F. Substrate temperatures must be below 120°F when applying product.

- **Application Rate (seams):** 5 gallons/125 ft. (6” width)
- **Application Method:** Brush or caulking gun
- **Application Method - Spray Formula:** Airless sprayer
- **Application Temp (air, surface):** 42° - 120°F
- **Drying Time (75°F, 50% RH):** Approximately 24 hours
- **Recommended Wet Mil Thickness:** 105 wet mils
- **Recommended Dry Mil Thickness:** 60 dry mils
- **Total Solids (by weight):** 68% ± 1%
- **Total Solids (by volume):** 56% ± 2%
- **Specific Gravity:** 1.44 ± 0.1
- **Tensile:** 225 psi ± 10%
- **Weight per Gallon:** 12.0 ± 0.5 lbs
- **Viscosity (75°F):** 225,000 ± 22,500 cps
- **Clean-up:** Water before curing

B. TOPESTER Reinforcing Fabric
TOPESTER Fabric is a non-woven, spun bonded 100% polyester web that must be used in conjunction with TOPCOAT® Flashing Grade or FlexSeal at all penetrations, joints, or changes in plane that are subjected to high shear or stress.

- **Average Weight (Ounces per square yard) per ASTM D1117:** 1.5
- **Average Tensile Strength per ASTM D1628:** 44 psi
- **Average Elongation at break per ASTM D1628:** 53%
- **Trapezoidal Tear Strength per ASTM D2263:** 18.5 lbs
C. TOPCOAT® Roofing Membrane

TOPCOAT® is a water-based 100% acrylic spray-applied liquid, which cures to form a seamless rubber membrane that covers the entire structural concrete roof. It offers high tensile strength and elongation, and is virtually undamaged by extended exposure to solar ultraviolet energy. It is low in VOC, non-flammable and presents minimal hazard to the applicator and the environment. Ultraviolet rays enhance curing. It is available in white (for maximum reflectivity) and 15 standard colors. Custom tinting is available upon request. Do not apply at temperatures below 42°F. Substrate temperatures must be below 120°F when applying product.

- Application Rate: 1.25 to 3.0 gallons/100 sq.ft. total
- Application Method: Airless sprayer, brush or roller
- Application Temp (air, surface): 42° - 120°F
- Drying Time (75°F, 50% RH): Approximately 24 hours per coat
- Wet Mil Thickness:
  - (1.0 Gallon/100SF) - 16 wet mils
- Dry Mil Thickness:
  - (1.0 Gallon/100SF) - 9 - 10 dry mils
- Total Solids (by weight): 71% ± 3%
- Total Solids (by volume): 58% ± 2%
- Specific Gravity: 1.48 ± 0.06
- Weight per Gallon: 12.3 ± 0.5 lbs
- Viscosity (75°F): 19,000 ± 3,000 cps
- pH: 10.0 ± 1.0
- Elongation: 375% ± 25%
- Tensile Strength: 275 ± 25 psi
- Water Permeability: 5.28 perm inch (ASTM D-1653)
- Freeze - Thaw Stability: Passes five (5) cycles
- Low Temp Flexibility: 35 mil dry film will bend 180° @ -30°F without fracturing
- Clean-up: Water before curing

D. TOPCOAT® FlexSeal

TOPCOAT® FlexSeal is a white solvent-based synthetic elastomeric sealant. FlexSeal is extremely flexible and durable. Like all solvent-based products, the surface must be completely free of moisture before application. A low viscosity version of FlexSeal (FlexSeal LV) is available for use in confined areas.

- Application Rate (seams): 5 gallons total/100 ft.
- Application Method: Trowel or stiff bristle brush
- Application Temperature (air, surface): 32° - 120°F
- Drying Time (75°F, 50% RH): Approximately 24 hours
- Recommended Wet Mil Thickness: 85 wet mils
- Recommended Dry Mil Thickness: 50 dry mils
- Total Solids (by weight): 77% ± 2%
- Total Solids (by volume): 66% ± 2%
- Specific Gravity: 1.24 ± 0.1
- Weight per Gallon: 10.3 ± 0.5 lbs
- Viscosity (75°F): 600,000 ± 100,000 cps
- LV-Viscosity (75°F): 150,000 ± 15,000 cps
- Tensile: 485 psi ± 10%
- Storage: Store in well-ventilated area at 50°F to 80°F; protect from freezing
- Shelf Life: 1 Year

E. Airless Sprayer and Accessories

As recommended by GAFMC's Contractor Services Department for application of sprayable TOPCOAT® products.
PART 3 - EXECUTION

3.01 PREPARATION OF SUBSTRATE

A. Examine Substrates To Receive New Roofing
Do not proceed with installation of TOPCOAT® Roofing System until unsatisfactory conditions have been corrected in a manner acceptable to the manufacturer (GAFMC). Roof must have positive drainage.

B. Preparation Of The Roof Substrate Is The Responsibility Of The Installer.
Installer shall address and correct all of the following:
1. Treatment of large gaps and cracks
2. Treatment of ponding water areas
3. Thorough cleaning/removal of existing paints and coatings
4. Treatment of residual asphalt
5. Miscellaneous items

C. Treatment of Large Gaps and Cracks.
All large gaps and cracks (greater than 1/4”) shall be repaired using a high quality concrete grout. Grout must be fully cured before application of TOPCOAT® products.

D. Treatment of Ponding Water Areas.
Installer shall make every effort to eliminate all ponding water areas on the roof prior to application of TOPCOAT® products (“ponding water” is defined as water which does not properly drain and remains for more than 48 hours after precipitation stops).

E. Treatment of Ponding Water Areas
Structural concrete substrate must be pressure washed with water. Use minimum working pressure of 3,000 psi to remove all dirt, dust, previous paints/coatings which are delaminating and waste products (oil, oil-based roof cements, solvents, grease, animal fats, etc.). All existing silicone-based sealants must be completely removed from roof substrate prior to application of TOPCOAT® products.

F. Treatment of Ponding Water Areas
Installer shall make every effort to remove asphaltic roofing elements. Removal efforts must include use of methods such as pressure washing, scrappers, wire brushes, electrical drill wire-wheels, or other similar tools. Residual asphalt is defined as asphaltic material remaining after the exercise of all required removal efforts, and exists when there is asphaltic material greater in thickness than 3 mils over an area greater than 1 square foot. Residual asphaltic areas are to be addressed with MB Plus.

G. Preparation of Test Patches
Installer shall prepare no less than three (3) test patches for all questionable roof substrates to verify adhesion of TOPCOAT® products. Minimum test patch size shall be one square foot. After the test patches have been applied, allow at least one week of drying time before checking adhesion. Check adhesion by slicing an "X" (approx. 6" in size) near the center of the test patch. Then try to remove the TOPCOAT® material at the center of the "X" with a spatula. Test patches which show good adhesion will release or chip from the surface in very small pieces. Test patches which peel off of the surface show a surface that is not acceptable. Test patches shall be labeled and photographed to document adhesion test results. Installer shall consult with the GAFMC’s Contractor Services Department concerning all adhesion test results.

H. Miscellaneous Items
1. Pitch Pans: For most situations, pitch pans shall be capped with sheet metal so they can be sealed with TOPCOAT® Flashing Grade/TOPESTER Fabric, FlexSeal/TOPESTER Fabric, FlexSeal/TOPESTER Fabric or FlexSeal. Contact GAFMC’s Contractor Services Department for particulars.

2. Neoprene Pipe Boots: GAFMC recommends installation of neoprene boots prior to flashing work being performed for certain types of pipe penetrations. Neoprene boots must first be sealed to the roof using a bead of TOPCOAT® FlexSeal prior to mechanical attachment with EverTite™ fasteners. Contact GAFMC’s Contractor Services Department for particulars.
3. Condensate Lines: GAFMC recommends installation of condensate lines from HVAC units to gutters as part of the overall roofing contract. Type of piping used for condensate lines may vary depending on local building codes. Lines must be securely fastened to the concrete deck.

3.02 APPLICATION AND INSPECTION INFORMATION

A. Flashing Work: All joints, cracks, stress areas, and roof penetrations must be treated with a 6" wide area of TOPCOAT® Flashing Grade, or one layer of TOPESTER Fabric and a final layer of Flashing Grade to completely embed the TOPESTER Fabric. Flashing Grade must be feathered at least 1" beyond each side of the 6" width to allow water to flow over the seam.

B. Interim Inspection: Inspect substrate preparation and flashing work for problem areas (e.g., gaps, cracks, fishmouths, air pockets, etc.) to ensure that work is complete and satisfactory prior to application of TOPCOAT® Roofing Membrane.

C. Inform Project Architect and GAFMC Guarantee Services Department when all substrate preparation and flashing work will be complete and the Installer is ready to proceed with application of TOPCOAT® Roofing Membrane. Allow a minimum of two (2) weeks for the interim inspection to be made by GAFMC’s Roof Protection Services Department. Any final roofing installation prior to this interim inspection is subject to rejection by the Project Architect and/or the GAFMC Contractor Services Department.

3.03 COATING APPLICATIONS

10-Year Diamond Pledge® System:

1. Spray-apply base coat (gray) of TOPCOAT® Roofing Membrane at a rate of 1.25 gallons per 100 sq.ft. Allow at least 24 hours drying time and inspect the base coat for defects, flaws or holidays. Correct any unsatisfactory conditions prior to proceeding.

2. Spray-apply finish coat (white) of TOPCOAT® Roofing Membrane at a rate of 1.75 gallons per 100 sq.ft. It should not be applied unless the base coat is clean and dry and will provide proper adhesion. Allow a minimum of 24 hours drying time prior to allowing foot traffic or inspection of roof surface.

3. After at least 24 hours has elapsed, inspect the final roof surface for flaws, holidays, insufficient thickness, etc. Specified dry mil thickness is 28 - 32 mils in the field of the roof. All unsatisfactory areas must be repaired.

For application questions, please contact GAFMC Contractor Services at 1-800-766-3411.

Note: Repair leaks promptly to avoid adverse effects, including mold growth.
